	Re	commended Puppy Plan
		fornia should not be adopted out until 8w or older (not legal)**
6 - 8 weeks old	• •	s, vaccinate for distemper/parvo every 3-4 weeks until 16 weeks old
		of your home to socalize or allow your puppy to interact with
		ete vaccination status until all puppy shots are completed. They
, ,		d unless they get the complete series, on time.
8 weeks old	DHPP #1	Distemper/Parvo viruses - highly contagious & puppies are at highest risk
o weeks old	Deworm	Deworm for most common parasites with pyrantel
(2 months)	&	(Also give praziquantel if fleas or tapeworms seen)
	Fecal Test	Send in fecal test / Giardia ELISA - additional deworming as indicated by results
	Monthly Flea	Flea Prevention: Start applying every 3-4 weeks, use year-round always
	Prevention	Even if no fleas are seen / pet indoors, recommended due to high potential exposure
		Flea prevention should be used every month for the life of your pet Heartworm/Internal Parasite Prevention:
	Monthly	Start giving Heartgard every 4 weeks, use year-round always
	Heartworm	MUST start HWP before 6m (24w) or HW test required to begin prevention
	Prevention	Heartworm prevention should be used every month for the life of your pet
12 weeks old	DUDD . Lauta	This is the 2nd Distemper / Parvo shot with Leptospirosis added. Lepto vaccination
(3 months)	DHPP + Lepto	is recommended for all dogs in this area. Risk factors include: exposure to moist environments, areas with livestock, wildlife, or rodents
16 weeks old	Rabies	Boost in 1y (1y, 4m old), then every 3 years ALWAYS
10 WEEKS OIG	DHPP + Lepto	boost in 19 (19, 4in old), then every 3 years ALWAIS
(4 months)	final puppy shot	Boost every 1 year
	Bordatella	aka Kennel Cough; Boost every 6m if at high risk, every 1y if at risk
16 - 24 weeks old (4 - 6 months)		aka Kennel Cough; Boost every 6m if at high risk, every 1y if at risk **pain control medications and E-collar strongly recommended
